- COMPARISON
- FURTHER IMPLEMENTATION ON APPLICATION

Project Name: “MR.NETWORK”

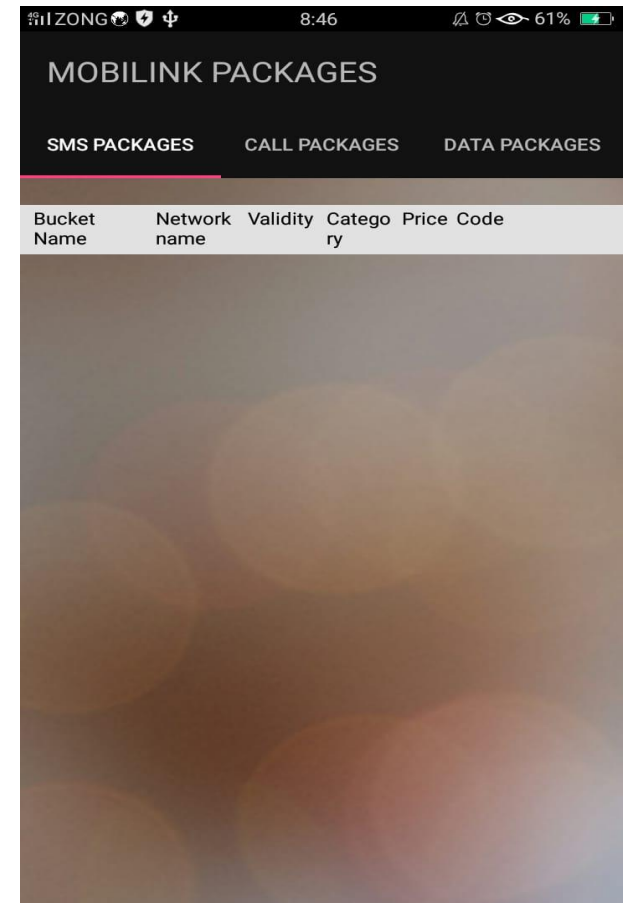

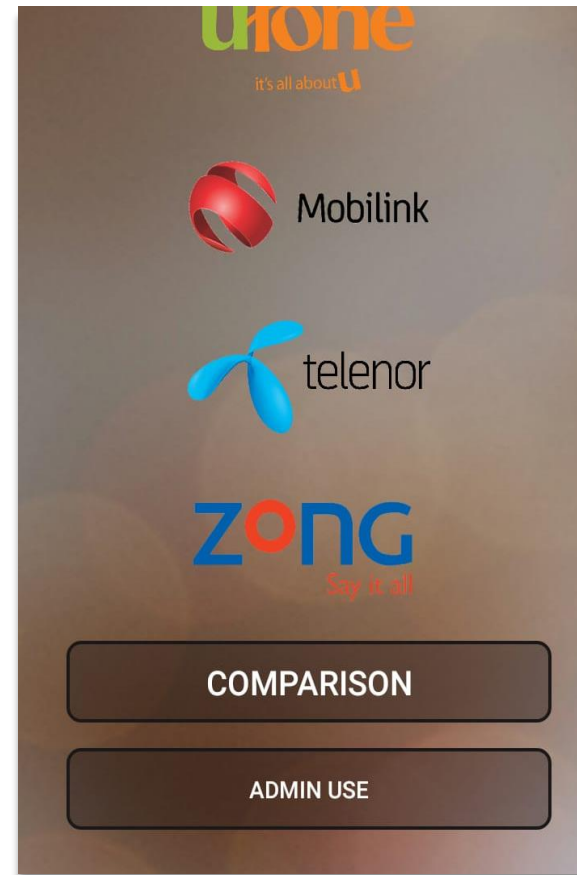

Problem Statement:

- The thing is that on Ufone's website there are packages of Ufone's networks e.g sms call data etc, and on Mobilink's website there are packages of Mobilink. They all have their own apps, But we have to create a platform where we have packages of all the networks. Details of sms packages of every network ,that how expensive is one network's package of 1-day is and how are others. So we created this platform so that users can easily identify which networks are expensive and which are cheap.

Features Of Our Application:

Here we have comparison button. Here we can compare the sms packages, call packages and data packages, but at the moment we can't do anything. So we have created an admin use and we will make our own dummy packages. So we have created an admin use and we will make our own dummy packages because we have to show our project.

WORKING OF OUR APPLICATION:

we have created an admin use and we will make our own dummy packages because we have to show our project. So we have select Ufone sms category for 1 day . Wel will put our own bucket name e.g daily sms or anything.

In the same way we will now go to Mobilink.

The screenshot shows a mobile application interface with a dark status bar at the top displaying '4G IZONG', signal strength, battery level at 60%, and the time 8:41. The app's title bar is black with the text 'ADD TO DATABASE' in white. The main content area has a brown background with a subtle pattern. It features three dropdown menus: 'ufone sms', '1 day', and 'Sms', each with a downward arrow. Below these are three input fields with placeholder text: 'Enter bucket name', 'Enter price', and 'Enter subscription code'. At the bottom, there is a white button with the text 'ADD TO DATABASE'.

ADD TO DATABASE

ufone sms ▼

1 day ▼

Sms ▼

Enter bucket name

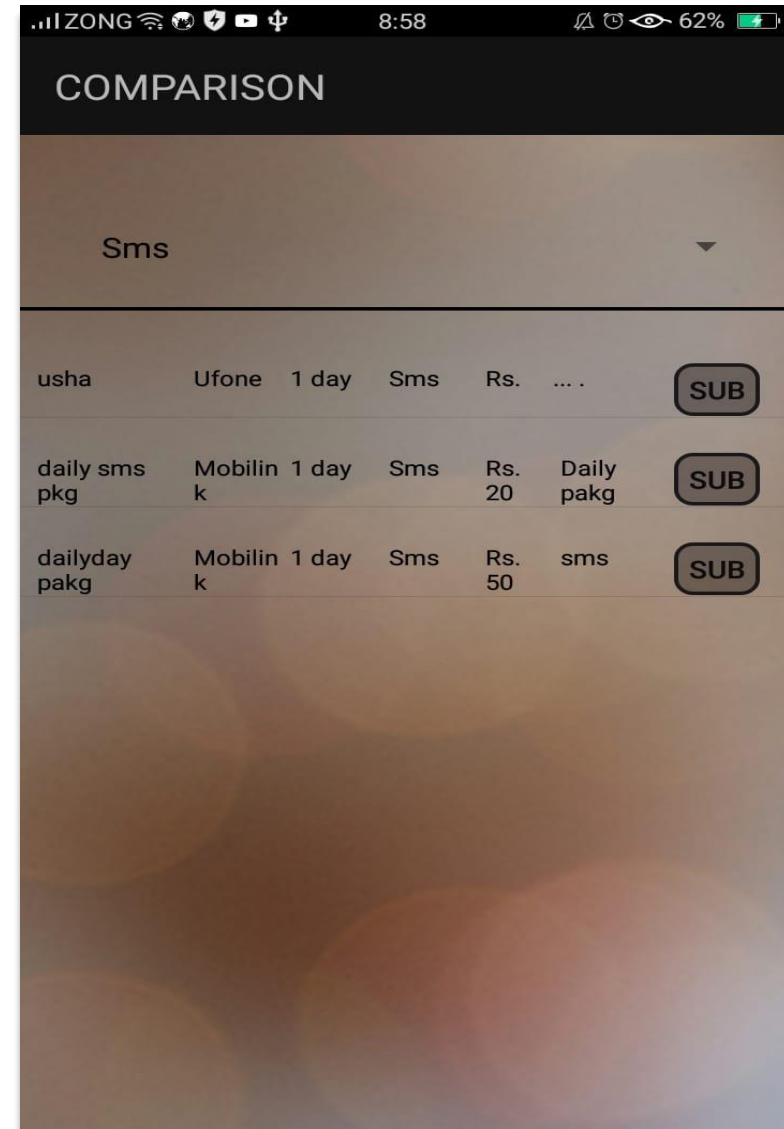

Enter price

Enter subscription code

ADD TO DATABASE

COMPARISON:

Now have added on in Mobilink with it's subscription code and we can subscribe it from here and we have also added one in Ufone. Now the reason for our app is to compare all the details. We haven't added any call packages. We have only added sms packages. So it's showing Ufone's sms for 1-day for 50rs and for the Mobilink's network is 52rs. The for us the ease is that we have compared which network is cheap and good. This was the reason for our application. We can go in admin use and add more data. Like telenor's call, we select call here also and categories whether is 1-day or 1-week. So in this way we have added dummy data anyway.

FURTHER IMPLEMENTATION CAN BE DONE:

Now we can add further features to our application like we can take access to all networks Ufone, Mobilink, Zong, Telenor etc. and after comparison we can easily subscribe to that packages through this application, we don't need to go to those networks websites.

THANK YOU!
